RESEARCH INTERESTS

My research investigates bilingual language processing and cognition, with a special attention to code-switching. Integrating methods from psycholinguistics (e.g., eye-tracking, self-paced reading), sociolinguistics (i.e., corpora, personal social networks), and cognitive neuroscience (i.e., event-related potentials and oscillations), my work seeks to characterize how the experiential, contextual, and social dimensions of bilingual language use, including ambient exposure and speech community norms, may be modulatory of real-time bilingual comprehension and production as well as domain-general abilities, such as prediction, attention, memory, conflict adaptation, and Theory of Mind. At its core, my research champions a socially embedded approach to human language processing and cognition.
