## RESEARCH INTERESTS

---

My research investigates bilingual language processing and cognition with a special interest in code-switching. Integrating methods from psycholinguistics (e.g., eye-tracking, self-paced reading), sociolinguistics (i.e., corpora, personal social networks), and cognitive neuroscience (i.e., event-related potentials and oscillations), my work seeks to characterize how the experiential, contextual, social, and interactional dimensions of bilingual language use, including ambient exposure and speech community norms, may be modulatory of real-time bilingual comprehension and production as well as domain-general abilities, such as prediction, attention, memory, conflict adaptation, and Theory of Mind. At its core, my research champions a socially embedded approach to human language processing and cognition.
